CITY TIE TROUBLE

In the “BELL NORMAL” position, the “BELL TEST” will sound the bell. When there is a trouble, the bell will sound and when silenced with the toggle switch, the LED will light. The “BELL SILENCE” switch will silence the bell. When the trouble clears, the LED will turn off and a ring back will sound until the “BELL SILENCE” switch is returned to the normal position.

The information is engraved on a sign attached to a two-gang stainless steel plate. It is available in red with white text.

The panel mounts to a two-gang deep bell box or a two-gang deep wiremold box and operates on 24VDC. This panel can be flush mounted with a two-gang plaster ring on a deep 4” square 1900 box.
